

PHARMACEUTICAL INNOVATION EXPANDS INTO THE US WITH FEMALE CEO

nen it comes to business sustainability, our initial thoughts often revolve around improving organization efficiency, improving financial performance, and implementing a carbon reduction strategy

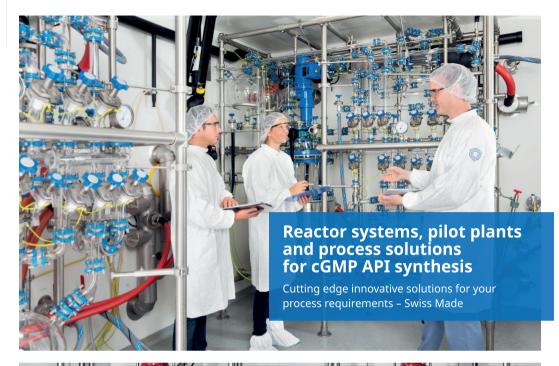

However, in the UN's SDGs (Sustainable Development Goals), the intergovernmental organization has recognized the need for gender parity within business.

"Gender is woven throughout the SDGs as it sits at the intersection of economic. social and environmental issues", states the UN. "It has its own Goal, SDG 5-with the ambition of achieving gender equality and empowering all women and girlsand is mentioned explicitly in 10 of the other Goals".

But, in 2023, are we close to achieving gender parity in leadership? A recent report by Forbes implies we have a long way to go - five generations, in fact.

PHARMABLOCK

The Global Gender Gap report published by the World Economic Forum highlights that at the current rate of progress, the global economy won't see gender parity for 131 years. It reports a further stark figure of 169 years to close the Economic Participation and Opportunity gender gap.

President of PharmaBlock (USA), Dr. Jing Li, spoke to Business Enquirer about her views on Women in Leadership.

"We need to encourage women to fearlessly embrace new opportunities, whether it's the beginning of their career journey or taking on a c-suite role," she said.

She herself is an example of what happens when you use fear as a motivator, rather than a deterrent.

Having spent eight and a half years as an Associate Principal Scientist at Merck, Jing was offered the opportunity to join PharmaBlock

"Whilst it was a fantastic opportunity, I was happy at Merck so it felt like a big risk to move businesses. Speaking with my daughter, she said it sounded "exciting". It was my responsibility to show my daughter that we mustn't let fear get in the way of opportunity," shared Jing.

This teachable moment is something that Jing aims to instil in business as well as around the dinner table.

"The leadership traits that women naturally possess are undervalued by business world," she said, "I believe the strengths we offer include softer skills which can help to create the

BUSINESS

right environment for olleagues to be nurtured, motivated, and developed".

Jing finds fulfilment in her role as President, USA, not only through PharmaBlo k's ontribution to the pharma euti al industry, but also by ultivating a work environment where olleagues an realise their full potential.

Speaking of PharmaBlo k in the USA, Jing feels that she and her team have fostered an in lusive and ollaborative ulture where olleagues genuinely feel that they have ownership in both the business outputs and their roles.

"By ensuring that our vision is learly ommuni ated, olleagues understand their purpose and have a sense of meaning in what they do. The opportunities at PharmaBlo k are unlimited." she added.

PharmaBlo k is now a fully integrated CRDMO (ontraited resear h, development, and manufal turing organization) with lear vision: folusion innovative hemistry and low-arbon manufal turing, bring sustainable and efficient solutions to its lients, ultimately supporting partners in bringing medicines to those in need more quilkly.

When the business was first established in China in 2008, it began by designing and synthesizing a large olle tion of rationally designed, high-quality, and stru turally diversified hemi als, known as building blo ks in the field of drug R & D.

These building blo ks are in reasingly adopted by global drug hunters to enri h stru ture diversity, improve ompound performan e, expand patent spa e, and eventually a elerate drug dis overy proje ts.

Over the years, PharmaBlo k has a umulated expertise and earned the trust of its ustomers, allowing it to expand its business s ope beyond being a building blo k supplier. It now serves as a omprehensive servi e and solution partner, supporting global pharma euti al

a d biotech compa ies throughout the drug R&D a d commercial processes.

E abled by sustai able strategies, PharmaBlock has gai ed a reputatio as a quality part er for the developme ta d ma ufacturi g of pharmaceutical i termediates, drug substa ces, a d drug products, all the while achievi g cost efficie cy a d a gree er footprit.

PharmaBlock team i Chi a a d US are focusi g o four key areas of sustai ability, with of course, o e of those bei g People.

"Supporti g diversity a d i clusivity is key to sustai ability," said Ji g. "It creates a collaborative a d i ovative work e viro me t a d has profou d impact o team motivatio , productivity a d lo gterm busi ess success."

Supply chai resilie ce is a i tegral part of its sustai ability strategy, as PharmaBlock co siders ot o ly its ow supply chai , but also the role it plays i its clie t's supply chai ."We have ide tified the supply chai values we co sider to be crucial a d have developed a robust way of worki g. We impleme t a supplier developme t program to e ha ce sustai ability aware ess a d operatio s." explai ed Ji q.

A other eleme t to its sustai ability strategy is geographic diversity, e suri g accessibility to its clie ts - which over time has i cluded almost all of the top 20 pharmaceutical compa ies as well as hu dreds of small to medium biotech compa ies across the globe.

As part of its geographic expassionefforts, PharmaBlock launched and ew R&D facility in Pensylvania, USA in March 2023. This brings the business footprint to five facilities, three in China and two in the USA. "We interest and our presence in the USA as we see significant demand for drug development and manufacturing in the country," shared Jing.

I additio , PharmaBlock is dedicated

to ostering innovation. Its mission to "innovative chemistry or a better uture" highlights that chemistry innovation can provide more e ective, sa er, easier to use, and more accessible products and services or the uture; it is essential to do the right things at the very beginning, including addressing sa etv. environmental, and quality challenges, to enable greener and more e ficient R&D and manu acturing processes.

With this mission at its core, PharmaBlock are pioneers in introducing continuous flow technology and biocatalysis into its manu acturing process. Whilst this concept has long been used in the petroleum industry, it is a new innovation or the pharma-chemical space. The new technologies are capable o overcoming the challenges that traditional chemistry processes typically struggle with.

"We are proud to have advanced innovative technologies like continuous flow manu acturing and biocatalysis or the pharmaceutical space. It brings many benefits to clients including scalability, sa ety, improved quality, reduced waste, cost saving and speed," said Jing.

By designing and assembling manu acturing-scale equipment capable

o achieving yearly outputs o hundreds o metric tons, what used to take months to produce can now be accomplished in a matter o two to three weeks, with lower cost, reduced energy usage, and less waste. The company is even planning to expand its impact by commercializing some o its technologies and equipment. making their innovative technology accessible to the entire industry.

PharmaBlock's commitment to innovation and sustainability has won several accolades recently, such as 2023 CMO Excellence in Green Chemistry Award by ACS and Top CDMOs by Pharma Tech Outlook. Additionally, PharmaBlock's sustainability practices and experiences have been documented in the recently released book "Sustainability Leaders" by DCAT (the Drug, Chemical & Associated Technologies Association), an association or companies involved in the Bio/ Pharmaceutical manu acturing value chain.

"When there is no solution available, we innovate," shared Jing, "the innovation never stops as well as our never-ending pursuit or excellence.".
